

# ADVANCE

## High – Alkali Laundry Break

### DESCRIPTION:

**ADVANCE** is a blend of alkalis with excellent emulsification and saponification properties, organic dispersing agents that enhance detergency and soil suspension and phosphate for softening water hardness and removing heavy stains.

### APPLICATION:

#### I. As a Break:

**ADVANCE** maybe used as a break for heavily soiled laundry. It improves the performance of the laundry detergent used in subsequent sudsing.

#### II. As an Alkali Builder:

**ADVANCE** maybe used as an alkali builder to improve the cleaning power of laundry detergents in heavily soiled laundry. It maybe added dry to the wheel together with **PRIDE** laundry detergent.

#### III. As an Additive to improve bleaching:

To make bleaching effective, the wash solution should have enough alkali to maintain a pH of at least 10 and sufficient polyphosphates to minimize graying of fabrics caused by mineral build up and redeposition of soil.

**ADVANCE** meets this requirement. When added to the bleached solution, **ADVANCE** will provide the required alkalinity and polyphosphates to make the bleach solution effective.

### DOSAGE:

I. As an Alkali Builder on oil stained tablecloth and napkins:

½ kg.per 100kgs.dry load

II. As a Break oil stained tablecloth and napkins:

½ kg.per 100 kgs.dry load
